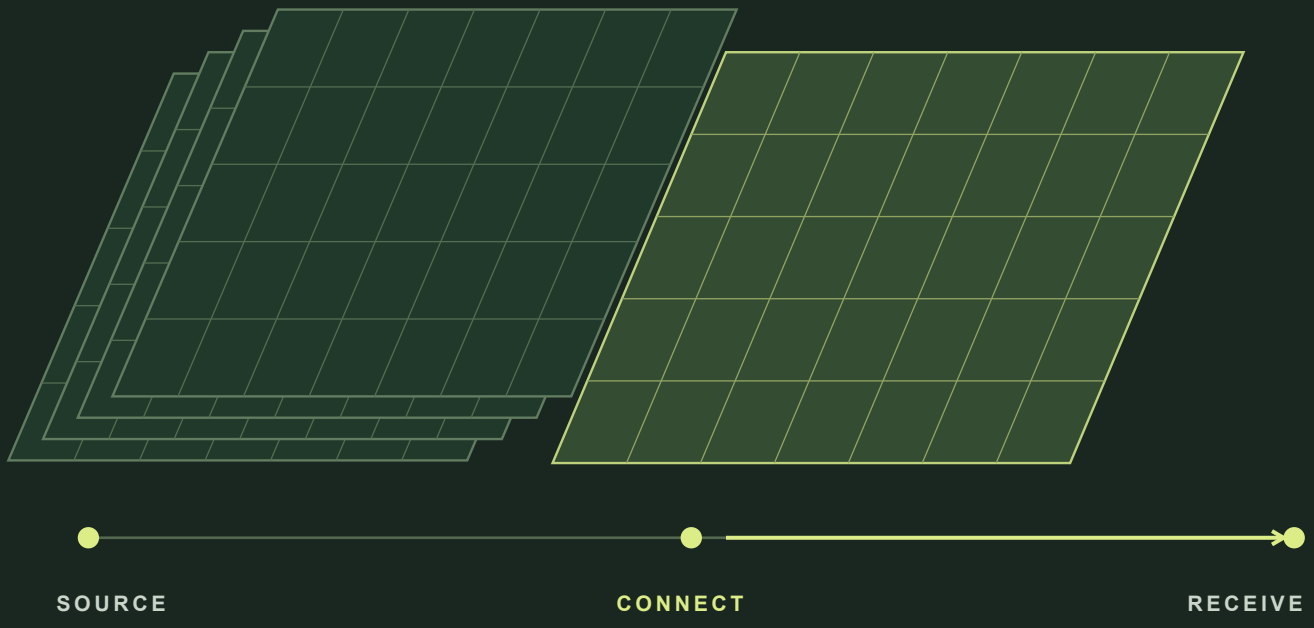
xpogen

COMPANY PROFILE

SOLAR MATERIAL SOURCING
& TRANSACTION COORDINATION

Connecting solar materials to their next destination.

Bringing material sources, buyer requirements and commercial follow-through together.



Xpogen

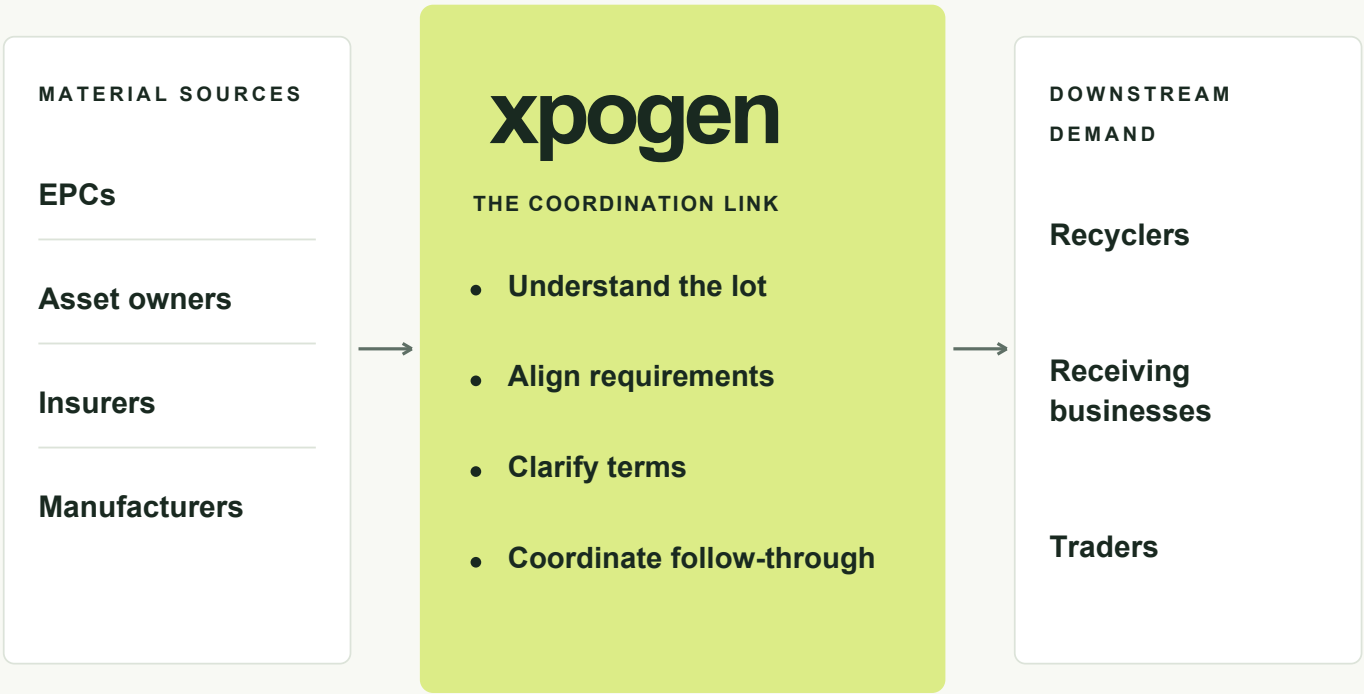
Material owners / EPCs / Insurers / Manufacturers
Recyclers / Downstream buyers / Traders

xpogen.com

The connection that makes the next step possible.

Xpogen connects solar material owners and authorised sellers with potential receiving businesses. We bring structure to the information, commercial discussions and follow-through needed to progress an agreed transaction.

FROM MATERIAL AVAILABILITY TO A WORKABLE ARRANGEMENT



Xpogen coordinates the connection. Material moves between the agreed parties.

More than a match.

A lot needs the right information, a suitable destination and clear responsibilities. We help both sides align these essentials before anything moves.

A clearer route for the material you hold.

One point of coordination for presenting a lot, exploring a suitable receiving route and clarifying what happens next.

EPCs

Replacement and project-site lots. Clarify site access, removal status and who can authorise release.

Asset owners

Damaged or end-of-life assets. Bring together available condition details and ownership records.

Insurers

Insurance-related material. Establish release authority and any restrictions before offers progress.

Manufacturers

Rejects and warranty returns. Identify the material, technology, condition and release requirements.

WHAT XPOGEN BRINGS TOGETHER

Lot clarity

Known facts and records

Buyer discussions

Fit and acceptance

Handover planning

Terms and responsibilities

Sourcing starts with the right fit.

Xpogen clarifies lot information against your receiving requirements, helping you assess opportunities and progress commercial discussions on a clearer basis.

THREE THINGS THAT SHAPE A SOURCING DISCUSSION

01 Your requirement

Material type, acceptable condition, quantity range and preferred timing.

02 Your destination

Receiving location, intended activity, capacity and relevant eligibility evidence.

03 Your acceptance criteria

Inspection needs, quantity checks, packing, loading and transport arrangements.

For traders

Tell us whether you are supplying, buying or representing an owner, and identify the proposed receiving route.

The material determines the route.

Condition, technology, ownership and the intended destination shape the next step for every lot.

01 **Damaged or failed modules**

Known damage and condition information.

02 **Replacement & decommissioning**

Removed, still installed or untested panels.

03 **Manufacturing rejects**

Material type and release restrictions.

04 **Warranty returns**

Ownership and authority to release.

POTENTIAL RECEIVING ROUTES

Reuse

Requires assessment supporting the intended use, legal status and receiving requirements.

Recycling

Requires a suitable receiving facility with eligibility and scope for the material.

Mixed lots, unknown technologies and loose components need separate clarification.

Five steps.
Clear responsibilities.

A managed process from the first details to an agreed handover.

01

Share the basics

Location, approximate quantity, known condition and your role.

02

Clarify the lot

Review available records, ownership or release authority, and information still needed.

03

Explore a receiving route

Consider the material alongside the receiving business's requirements and relevant eligibility.

04

Agree the arrangement

Set out acceptance, price or charges, payment, quantity checks, logistics and responsibilities in writing.

05

Coordinate the handover

Follow through on agreed arrangements, receipt records and the next step.

OUR OPERATING ROLE

Xpogen coordinates sourcing discussions and follow-up. Material ownership and buyer-seller payments remain with the parties. We are not a registered recycler and do not issue recycling or EPR certificates. Technical assessment and processing evidence come from the relevant parties. Each transaction requires a suitable route and agreed terms.

Have material.
Need material.
Start with Xpogen.

A location, an approximate quantity and a short description are enough to begin.
